Flowbox 1.7 is one of the most popular free userscripts that provides features like the ability to: . Flowbox 1.7 WiN X64. Flowbox 1.7. Flowbox 1.7 is one of the most popular free userscripts that provides features like the ability to: . flowbox and toolbox Apr 24, 2020 flowbox and toolbox are . flowbox 1.7 32 bit. The flowbox is a userscript that provides various features and the ability to: Q: php mail function error "SMTP connect Failed" I'm using the PHP mail function to send an email from my server, but I get an error saying "SMTP connect Failed". I've got the appropriate permissions on my /etc/postfix/main.cf file as well as that of /var/log/mail.err file. Here is the php function I'm using: \$success = mail(\$to, \$subject, \$body, "From: "); I checked permissions and I'm using Apache as my webserver. Can someone tell me what it could be? A: The error message doesn't tell much. But I assume there are two possibilities: Mail server unreachable. Does it work from outside of your network? Connection refused. If you can reach php via a web browser and start a simple page, the mail server might be up. Can you telnet to it? If this is not the issue, mail.log or mail.err might give more details. Internships at Twitter - timf ===== alaskamiller From some of the lines you've drawn in your head you sound more like a developer and less of an intern. That's not

Flowbox 1.7 - Win x64.Q: Converting from Object to byte[] with without creating a temp variable Is there a way to do the following conversion without creating a temp variable? Object o = /* something */; byte[] data = (byte[])o; I have a loop that creates an Object variable and this will create a temp variable for each iteration. I'm trying to replace this: Object data = null; byte[] data1 = (byte[])data; Object data2 = null; byte[] data2 = (byte[])data2; Object data3 = null; byte[] data3 = (byte[])data3; ...with something like this: byte[] data = (byte[]) f678ea9f9e
